Nokia 7250 IXR-R6 Interconnect Router
Release 20

The Nokia 7250 Interconnect Router R6 (IXR-R6)\(^1\) offers high port density in a compact, modular, extended-temperature form factor. It is ideal for IP anyhaul, aggregation, fixed-mobile convergence and mission-critical applications.

With the 7250 IXR-R6, service providers can rapidly create and deploy new services while extending the lifetime of their existing infrastructure investment. Public and private enterprises can efficiently expand their aggregation networks.

New service opportunities
The 7250 IXR-R6 supports new 5G transport requirements. It delivers low latency for fronthaul, Internet of Things (IoT) and mission-critical applications while providing a large buffer memory for less delay-sensitive applications.

Per-service queuing features support differentiated quality of service (QoS), which is ideal for any-G aggregation and fixed-mobile network convergence. These features also help industrial enterprises attain IT/OT convergence by simultaneously carrying both their business and operational traffic.

Network operators who upgrade to the 7250 IXR-R6 today will be ready to meet new service demands for many years to come.

Automation
The 7250 IXR-R6 uses the Nokia Service Router Operating System (SR OS) and is managed by the Nokia Network Services Platform (NSP). The NSP offers a rich set of service management features that automates new service delivery and reduces operating cost.

Standards-based software-defined networking (SDN) interfaces enable best-path computation to be offloaded to SDN controllers such as the Nokia NSP. 7250 IXR-R6 routers, operating as path computation clients (PCCs), collect and report per-link and per-service delay, jitter and loss metrics together with port utilization levels, for efficient path computation by a path computation element (PCE) function in the SDN controller.

---

\(^1\) The 7250 IXR-R6 is part of the 7250 IXR product family. Additional data sheets are available for other models in this product family.
Network longevity

The modular architecture used by the 7250 IXR-R6 supports a variety of deployment options. High-density 1GE/10GE/25GE/40GE/100GE media-dependent adapter (MDA) cards accommodate future growth. CFP2 DCO optics provide high bandwidth over extended distances, lowering the total cost of operations. Legacy interface cards support transport over existing TDM interfaces and allow for seamless migration to a next-generation IP/MPLS infrastructure.

Side-to-side airflow with a fan filter and redundant fans increases system lifetime and reduces maintenance costs. Side-to-side airflow also guarantees compatibility with 300 mm ETSI-compliant cabinets. This capability is typically not available with front-to-back cooled systems.

Reliable service delivery

Granular, in-depth and scalable per-service monitoring offers visibility into packet flows. The 7250 IXR-R6 provides comprehensive reporting on key performance indicators such as packet discard and forward counters. These capabilities improve reliability and help service providers fulfil service-level guarantees. Industry, enterprise and public sector operators can ensure that their critical operations traffic is receiving the required treatment.

The 7250 IXR-R6 provides excellent protection against link or equipment failures through control and datapath redundancy options. It quickly reroutes traffic and re-converges networks using a robust set of dynamic routing and recovery capabilities. Superior network resiliency reduces network downtime and improves the overall productivity of network operations. With a highly resilient network, network operators can reduce operating costs, improve end-user satisfaction and offer higher-value SLAs.

For harsh environments

The 7250 IXR-R6, with its extended temperature range, mechanical hardening and robust EMC design, meets the IEEE 1613, IEC 61850-3 and EN 50121-4 standards for power substation and railway environments.

Accurate timing

The 7250 IXR-R6 provides precise timing and accurate synchronization to meet the stringent requirements of 4G/5G mobile base stations and other networks. It improves timing accuracy over packet networks by combining built-in architectural features with Global Navigation Satellite System (GNSS) capabilities, ITU-T Synchronous Ethernet (SyncE) and the Nokia Bell Labs IEEE 1588v2 algorithm. Powerful QoS mechanisms deliver best-in-class performance by minimizing the delay and delay variation experienced by packet synchronization technologies. Port-based timestamping delivers consistently accurate IEEE 1588v2 performance.

Software features

The 7250 IXR-R6 supports, but is not limited to, the following features.

Services

- Point-to-point Ethernet pseudowires/virtual leased line (VLL)
- Ethernet Virtual Private Network (EVPN)
  - Virtual Private Wire Service (EVVPN-VPWS)
  - Virtual Private LAN Services (EVVPN-VPLS): IPv4 and IPv6 support, including Virtual Router Redundancy Protocol (VRRP)
  - Multihoming with single active or active/active
• Multipoint Ethernet VPN services with VPLS based on Targeted Label Distribution Protocol (T-LDP) and Border Gateway Protocol (BGP)
• Routed VPLS with Internet Enhanced Services (IES)/IP-VPN IPv4 and IPv6
• Ingress and egress VLAN manipulation for L2 services
• IP VPN (VPRN), Inter-Autonomous System (Inter-AS) Option A, B and C
• IPv6 VPN Provider Edge (6VPE)

Network protocols

• Segment routing
  – Intermediate System-to-Intermediate System (SR-ISIS) and Open Shortest Path First (SR-OSPF)
  – Traffic engineering (SR TE)
• MPLS label edge router (LER) and label switching router (LSR) functions
  – LDP
  – Resource Reservation Protocol with traffic engineering (RSVP-TE)
• BGP Labeled Unicast (LU) (RFC 3107) route tunnels
• IP routing
  – Dual-stack Interior Gateway Protocols (IGP)
  – Multi-topology, multi-instance IS-IS
  – Multi-instance OSPF
  – Multiprotocol BGP (MP-BGP)
  – BGP-LU support in edge, area border router (ABR) and autonomous system boundary router (ASBR) roles
  – Usage-triggered download of BGP label routes to Label - Forwarding Information Base (L-FIB)
  – Accumulated IGP (AIGP) metric for BGP
  – BGP route-reflector for EVPN and IP-VPN with VPNv4 and VPNv6 address families (AFs)
• Layer 3 Multicast – base routing
  – Internet Group Management Protocol (IGMP)
  – Protocol Independent Multicast – Sparse Mode (PIM-SM), Source Specific Multicast (SSM)
• Layer 3 Multicast - VPRN
  – Next-generation multicast VPNs (NG-MVPN)
  – SSM with multicast LDPv4 (mLDPv4)
  – IGMP/MLD
  – IGMP/MLD on Routed VPLS Interface
• Layer 2 Multicast
  – IGMP/MLD snooping

SDN

• SR-TE LSPs, RSVP-TE LSPs
  – PCC initialized, PCC controlled
  – PCC initialized, PCE computed
  – PCC initialized, PCE controlled
• SR-TE LSPs: PCE initialized, PCE controlled
• Topology discovery: BGP-Link State (BGP-LS) IPv4 and IPv6
• Telemetry: streaming interface statistics, service delay and jitter metrics

Load balancing and resiliency

• Control plane high availability (HA)
• HA routing and forwarding
• Segment routing topology independent and remote loop-free alternate (TI-LFA and rLFA)
• LDP LFA
• IEEE 802.3.ad Link Aggregation Group (LAG) and multi-chassis (MC) LAG
• Pseudowire and LSP redundancy
• IP and MPLS load balancing by equal-cost multipath (ECMP)
• VRRP
• Configurable polynomial and hash seed shift
• Entropy label (RFC-6790)
• RSVP-TE Fast Reroute (FRR)
• BGP Edge and Core Prefix Independent Convergence (BGP PIC)
Platform

- Ethernet IEEE 802.1Q (VLAN) and 802.1ad (QinQ) with 9k jumbo frames
- Detailed forwarded and discarded counters for service access points (SAPs) and network interfaces in addition to port-based statistics
- High-scale, per-Virtual Output Queue (VoQ) packet and byte counters
- High-scale, per-policer, detailed counters on a per-state basis
- Dynamic Host Configuration Protocol (DHCP) server for IPv4 IES, VPNv4
- DHCP relay, IPv4 and IPv6, IES, IP-VPN, EVPN-VPLS
- Accounting records

QoS and traffic management

- Hierarchical QoS (H-QoS)
  - Hierarchical egress schedulers and shapers per forwarding class, SAP, network interface or port
  - Port sub-rate
- Intelligent packet classification, including media access control (MAC), IPv4, IPv6 match-criteria-based classification
- Granular rate enforcement with up to 32 policers per SAP/VLAN including broadcast, unicast, multicast and unknown policers
- Hierarchical policing for aggregate rate enforcement
- Strict priority, weighted fair queuing schedulers
- Congestion management via weighted random early discard (WRED)
- Egress marking or re-marking

System management

- Simple Network Management Protocol (SNMP)
- Model-driven (MD) management interfaces
  - Netconf
  - MD CLI
  - Remote Procedure Call (gRPC)
- Comprehensive management with Nokia NSP

Operations, administration and maintenance

- IEEE 802.1ag, ITU-T Y.1731: Ethernet Connectivity Fault Management (CFM) for both fault detection and performance monitoring, including delay, jitter, and loss tests
- Ethernet bandwidth notification (ETH-BN) with egress rate adjustment
- IEEE 802.3ah: Ethernet in the First Mile (EFM)
- Bidirectional Forwarding Detection (BFD) IPv4, IPv6
- Two-Way Active Measurement Protocol (TWAMP), TWAMP Light
- A full suite of MPLS OAM tools, including LSP and virtual circuit connectivity verification (VCCV) ping
- Service assurance agent
- Mirroring with slicing support
  - Port
  - VLAN
  - Filter output: MAC, IPv4/IPv6 filters
  - Local/remote
- Port loopback with MAC-swap
- Configuration rollback
- Zero Touch Provisioning (ZTP) capable

Security

- Remote Authentication Dial-In User Service (RADIUS), Terminal Access Controller Access Control System Plus (TACACS+), and comprehensive control-plane protection capabilities
- MAC-, IPv4- and IPv6-based access control lists and criteria-based classifiers
- Per-port MAC security (MACsec)²
- IP security (IPsec)²
- Network address translation (NAT)²
- Firewall²
- Secure Shell (SSH)
