Nokia 7250 IXR-e series Interconnect Routers

Release 19

Routers in the Nokia 7250 Interconnect Router (IXR)-e series\(^1\) are used for access and aggregation and as 5G multi-access edge computing (MEC) leaf nodes. They are ideal for IP anyhaul and fixed-mobile convergence.

Ready for growth

The 7250 IXR-e series features high system throughput and a variety of interfaces. 100GE ports used for high-speed uplinks enable cost-effective 100GE ring architectures. They support 4 x 10GE or 4 x 25GE breakouts, allowing for exceptional flexibility in a variety of deployment configurations.

5G mobile and telco cloud infrastructures are moving toward 25GE interfaces. On the 7250 IXR-e series, the native 25GE ports are capable of supporting 1GE, 10GE or 25GE transceivers. Combined with support for GE SFPs in all SFP+ cages, the 7250 IXR-e allows for seamless migrations from 1GE to 10GE to 25GE rates without the need to replace the router.

Compact and power saving

The 7250 IXR-e’s compact (1RU) size and extended temperature range make it ideal for outside cabinet applications. It is 300-mm ETSI compliant with all up-front access and side-to-side air flow. A fan filter and redundant fans increase system lifetime and reduce maintenance costs.

7250 IXR-e systems consume approximately 15% less power than equivalent competing systems. Mass deployments for 5G will benefit significantly from this green design.

\(^1\) The 7250 IXR-e series is part of the 7250 IXR product family. Additional data sheets are available for other models in this product family.
Automation
The 7250 IXR-e series uses the Nokia Service Router Operating System (SR OS) and is managed by the Nokia Network Services Platform (NSP). It offers a rich set of service management features that automates end-to-end service provisioning, maintenance and OAM to enhance end user experience and reduce operating costs.

Standards-based software-defined networking (SDN) interfaces enable best-path computation to be offloaded to path computation elements (PCEs) such as the Nokia NSP. 7250 IXR-e-series routers operating as path computation clients (PCCs) collect and report per-link and per-service delay, jitter and loss metrics, together with port utilization levels, for efficient path computation.

Software features
The 7250 IXR-e series supports, but is not limited to, the following features.

Services
- Point-to-point Ethernet VPN services, Ethernet pseudowires/virtual leased line (VLL)
- Ethernet Virtual Private Network (EVPN)
  - Virtual Private Wire Service (EVPN-VPWS)
  - Multihoming with single active or active/active
- Multipoint Ethernet VPN services with VPLS based on Targeted Label Distribution Protocol (T-LDP) and Border Gateway Protocol (BGP)
- Routed VPLS with IES/IP-VPN IPv4 and IPv6
- Ingress and Egress VLAN manipulation for L2 services
- IP VPN (VPRN), Inter-Autonomous System (Inter-AS) Option A, B, and C
- IPv6 VPN Provider Edge (6VPE)
- Internet Enhanced Services (IES)

Interfaces
- Ethernet: 9K jumbo frames

Network protocols
- Segment routing with traffic engineering (SR TE)
  - Intermediate System-to-Intermediate System (IS-IS) and Open Shortest Path First (OSPF)
- MPLS label edge router (LER) and label switching router (LSR) functions
  - Label Distribution Protocol (LDP)
  - Resource Reservation Protocol with traffic engineering (RSVP-TE)
- BGP Labeled Unicast (LU) (RFC 3107) route tunnels
- IP routing
  - Dual-stack Interior Gateway Protocol (IGP)
  - Multi-topology, multi-instance Intermediate System to Intermediate System (IS-IS)
  - Multi-instance Open Shortest Path First (OSPF)
  - Multiprotocol BGP (MP-BGP)
  - BGP-LU support in edge, area border router (ABR) and autonomous system boundary router (ASBR) roles
  - Usage-triggered download of BGP label routes to Label - Forwarding Information Base (L-FIB)
  - Accumulated IGP (AIGP) metric for BGP
  - BGP route-reflector for IP-VPN, VPNv4 and VPNv6 address families (AFs)
- Layer 3 Multicast - base routing
  - Internet Group Management Protocol (IGMP)
  - Protocol Independent Multicast – Sparse Mode (PIM-SM), Source Specific Multicast (SSM)
  - Multicast Listener Discovery (MLD)
- Layer 3 Multicast - VPRN
  - Next generation multicast VPNs (NG-MVPN) SSM with multicast LDPv4 (mLDPv4)
  - IGMP/MLD
  - IGMP/MLD on RVPLS Interface
- Layer 2 Multicast
  - IGMP/MLD snooping
SDN
- SR-TE LSPs, RSVP-TE LSPs
  - PCC initialized, PCC controlled
  - PCC initialized, PCE computed
  - PCC initialized, PCE controlled
- SR-TE LSPs
  - PCE initialized, PCE controlled
- Topology discovery
  - BGP-Link State (BGP-LS)
- Telemetry
  - Streaming interface statistics

Load balancing and resiliency
- Segment routing topology independent and remote loop-free alternate (TI-LFA and rLFA)
- LDP LFA
- IEEE 802.3.ad Link Aggregation Group (LAG) and multi-chassis (MC) LAG
- Pseudowire and LSP redundancy
- IP and MPLS load balancing by equal-cost multipath (ECMP)
- Virtual Router Redundancy Protocol (VRRP)
- Configurable polynomial and hash seed shift
- Entropy label (RFC 6790)
- RSVP-TE Fast Reroute (FRR)
- BGP Edge and Core Prefix Independent Convergence (BGP PIC)

System management
- Simple Network Management Protocol (SNMP)
- Model-driven (MD) management interfaces
  - Netconf
  - MD CLI
  - Remote Procedure Call (gRPC)
- Comprehensive support through Nokia NSP

QoS and traffic management
- Hierarchical QoS (H-QoS)
  - Hierarchical egress schedulers and shapers per forwarding class, SAP, network interface or port
  - Port sub-rate
- Intelligent packet classification, including complex multifield classification
- Granular rate enforcement with up to 32 policers per SAP/VLAN including broadcast, unicast, multicast and unknown policers
- Hierarchical policing for aggregate rate enforcement
- Strict priority, weighted fair queuing schedulers
- Congestion management via weighted random early discard (WRED)
- Egress marking or re-marking

Platform
- Ethernet IEEE 802.1Q (VLAN) and 802.1ad (QinQ) with 9K jumbo frames
- Detailed forwarded and discarded counters for service access points (SAPs) and network interfaces in addition to port-based statistics
  - High-scale, per Virtual Output Queue (VoQ) packet and byte counters
- High-scale, per-policer, detailed counters on a per-state basis
- Configuration rollback
- Dynamic Host Configuration Protocol (DHCP) server for IPv4 IES, VPNv4
- DHCP relay for IPv4 IES, VPNv4, VPNv6
- Accounting records
Operations, administration and maintenance

- IEEE 802.1ag, ITU-T Y.1731: Ethernet Connectivity Fault Management (CFM) for both fault detection and performance monitoring, including delay, jitter, and loss tests
- Ethernet bandwidth notification (ETH-BN) with egress rate adjustment
- IEEE 802.3ah: Ethernet in the First Mile (EFM)
- Bidirectional Forwarding Detection (BFD) IPv4, IPv6
- Two-Way Active Measurement Protocol (TWAMP), TWAMP Light
- A full suite of MPLS OAM tools such as LSP and virtual circuit connectivity verification (VCCV) ping
- Service assurance agent
- Mirroring with slicing support
  - Port
  - VLAN
  - Filter output (Media Access Control (MAC)/IPv4/IPv6 filters)
  - Local/remote
- Port loopback with MAC-swap
- Configuration rollback
- Zero Touch Provisioning (ZTP) capable

Security

- Remote Authentication Dial-In User Service (RADIUS), Terminal Access Controller Access Control System Plus (TACACS+), and comprehensive control-plane protection capabilities
- Access control lists (ACLs) and Multifield Classifiers (MFCs)
  - IPv4, IPv6, and MAC access lists
- SNMP v3
- Secure Shell (SSH)
## Technical specifications

About Nokia

We create the technology to connect the world. Powered by the research and innovation of Nokia Bell Labs, we serve communications service providers, governments, large enterprises and consumers, with the industry’s most complete, end-to-end portfolio of products, services and licensing.

From the enabling infrastructure for 5G and the Internet of Things, to emerging applications in digital health, we are shaping the future of technology to transform the human experience. networks.nokia.com
