The benefits of the Nokia DelOps approach

1. Improve your roll-out cycle times for network function upgrades and updates from months to weeks.
2. Reduce the cost of creating, executing and maintaining test cases and tracking and managing releases and features.
3. Reduce the risk of upgrades and updates in your production network with holistic automation.
4. Reduce the risk of going over time and budget by developing your own CI/CD pipeline and managing your infrastructure.

DelOps CI/CD services part of Nokia full suite of design, consult, deploy and operations services
